Fair Harbour Tsunami Evacuation Information

Local Tsunamis

If an earthquake knocks you down, drop, cover, and hold on until the shaking stops. Then, immediately proceed with your emergency supplies to the tsunami muster point (seacan up the hill). The earthquake shaking was your warning that 7-meter high tsunami waves are coming in 30 minutes!

Warning Signs

- Strong earthquake
- A sudden rise or fall of the ocean
- Hear a loud roar from the ocean

Distant Tsunamis

If a distant tsunami is generated from Alaska, we estimate it will take 3 hours for 5-meter high waves to reach Fair Harbour. If you hear the tsunami siren, receive a phone notification, or hear a warning on Channel 16, evacuate past Zeballos if the roads are safe to do so. If evacuating on the road is not possible, gather your emergency supplies and proceed to the tsunami muster point.

- Unhitch your boat trailer from your vehicle and leave your boat in Fair Harbour.
- **Do not** attempt to remove your boat from the water.
- Arrange to car pool and ride share wherever possible to minimize road congestion.

Warning Signs

- Emergency alerts
- Tsunami sirens
- Warning broadcasts

If you are a resident who has been evacuated please contact 250-203-1972 or ess@srd.ca to be connected with Emergency Support Services.
